Turny Evo

Get seated outside the vehicle, at your desired height.

The Turny® Evo is an advanced seat lift that moves the car seat outside the vehicle and lowers it to your preferred level, making transfers from a wheelchair or sitting easier. With the push of a button, it lifts you back inside, offering effortless accessibility. Designed for modern cars, it's perfect for anyone needing assistance getting in and out, and its unique features make it compatible with models other lifts can't accommodate.

Easy transfer to and from your wheelchair

Not just for wheelchair users

Turny Evo

Passenger or driver?

The Turny® Evo works on the passenger's side and in many cases even on the driver's side. In certain larger vehicles, it can also be installed in the second row of seats.

No permanent modification

As with all our swivel bases and seat lifts, the installation is completely reversible. In other words it will not affect the resale value of your car. You can even bring it along to your next car.

Easy to use hand remote control

Vehicle seats

Car seats designed for swivel seats and seat lifts.

Thunder Seat

Thunder Seat is a safe, economical, and comfortable alternative to other feature-rich car seats, designed to seamlessly integrate with the vehicle's interior.

This seat comes with a built-in seat belt for added safety and convenience. The optional Plus kit raises the front of the seat cushion, enhancing seating comfort and helping to prevent users from sliding forward. We highly recommend this kit for all Thunder Seat installations.

Built-in footrest

Fully adjustable comfort

Safety and reliability

We take safety very seriously. That's why we put all our products through rigorous testing. The Turny® Evo has passed crash tests, extreme climates and a lifetime of usage.

Since it relies on power from the car itself, there's a manual backup system, in the event of a complete power failure in your car.
We are very proud of this innovative product and every little detail it has to offer.
